NEW

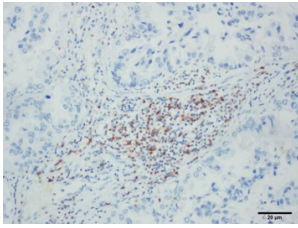

We're excited to let you know, a new product line made especially for Anogen's loyal customers.

ANTI-PD-L1 CLONE 12B4

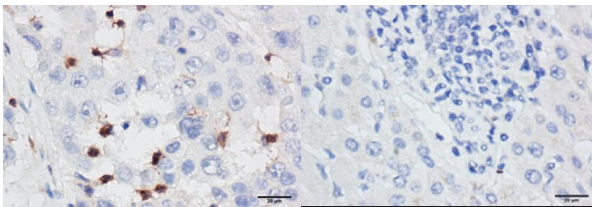

Immunohistochemistry:

A). Staining of thymus gland. Tissue sections were treated by heat induced epitope retrieval before primary antibody was added. The secondary antibody was an HRP-labelled goat anti-mouse IgG antibody.

B). Staining of lung cancers. Positive stain on plasma of lung lymphocytes, negative stain on alveolar epithelial cells and the nucleus of lung lymphocytes were observed.

C). Staining of hepatocellular carcinoma using PD-1 clone 9E11 and using a negative control antibody. Positive stain was observed on lymphocytes of the peritumoral tissue with clone 9E11.

More Clone are now available in the Anogen store.
